Humidity 63 per cent.

The eighth day of the heated spell opened later than either of its seven sultry predecessors.

The night was one of intense heat. People slept unrestraining sleep or no sleep at all in a temperature that never once got below 81 degrees, and averaged 84 degrees right through the night.

Seven days with the atmosphere heated to more than 90 degrees, three times reaching 101 degrees, and once passing up to 98½ degrees, had reduced the power of individual resistance to such a low point that to-day's day is filled with reports of prostrations and many deaths, due entirely to the heat.

At 10 o'clock this morning the official thermometer on the top of the Equitable building marked 90½ degrees, the highest point reached at last hour of the day since the Weather Bureau was established, twenty-one years ago.

There was no wind, or but the movement of air was less than three knots an hour from the northwest—and this atmosphere was stifling with heat at 66 per cent. of humidity.

These are the conditions that are making strong men and women wilt in the street and making the ambulance service of the several hospitals to its very utmost.

People suffering on beds of sickness are endangered in an unequal combat, and the record of deaths during this long period of sweltering weather is appalling.

There were twenty deaths from heat up to midnight and others have occurred since, following is the record of deaths to-day up to noon:

### DEATHS FROM HEAT.

James Thornton, 22 years old, of 531 East Avenue, died at his home about midnight from heat.

John Bernhart, 41, piano-maker, of 234 East 10th street, died of heat at his home, East 10th street, 61, of 401 West Third street, prostrated by heat, died suddenly at home.

Mary Collins, forty-five, employed at Thornton's restaurant, 2519 Third avenue, died at home from the heat.

Michael Clausen, forty, of 329 East 10th street, died from heat prostrated at that address.

John Clausen, forty-seven, saloon-keeper at

ing breeze that at the city
